

Mini Shoe™ Primary Seal

The **HMT Mini Shoe Primary Seal** is specifically designed for use with internal steel floating roofs, where tight rim spaces are often encountered. This Seal has the same superior long-lasting qualities and positive vapour sealing capabilities as our Scissor Shoe Primary Seal, but is engineered to operate in narrow rim spaces.

The innovative feature of the seal is the **HMT Mini-Shoe Type Hanger Assembly**. It successfully maintains positive gap sealing ability while accommodating rim spaces as small as 2". Made of lightweight galvanized or stainless steel, the Mini-Shoe Type Hanger Assembly combines superior strength with economical corrosion prevention.

Each **Mini-Shoe Primary Seal** is designed for a specific tank application and is engineered for rapid field installation. With its wide range of metallic and non-metallic materials, **Mini-Shoe Primary Seal** is resistant to virtually all products stored in Floating Roof Tanks.

Advanced Features

- Unique Mini-Shoe Type Hanger, Pusher Bar and Pusher Plate Assemblies
- Compatibility with all Stored Products
- Compliance with EPA and Local Regulations
- Compatibility with Welded and Riveted Tank Shells
- Available with Secondary Seal System
- Horizontal or Vertical Rim Mount

Wide Range of Seal Materials

Metallic:

- Stainless Steel
- Galvanised Steel

Primary Vapour Barrier Fabric

- HMT's PTFE Laminated Fluoropolymer (Teflon®)
- Urethane, polyester reinforced
- These and other fabrics available in various thickness

Mini-Shoe™ Primary Seal is Patent Protected
